Application Information:

- This igniter is intended for use with 240 VAC burner systems.
- It is rated for continuous duty and can be used with intermittent, or interrupted ignition primary controls.
- The Beckett oil igniter is designed to mount in the same manner as ignition transformers and igniters.
- This igniter can be adapted to multiple base plates to accommodate Beckett residential and commercial burners. It will also fit on many other vendors’ base plates. For other vendor base plates, verify that the igniter fit is free of air leakage between the base plate and the igniter.

CAUTION: Do not use this igniter beyond its design specifications. Improper operation and igniter failure may result.

Specifications:

- **Input Voltage:** 208-240 VAC, 50/60 Hz
- **Output Voltage:** 20 kV
- **Output Current:** 25 mA RMS
- **Input Current:** 0.2A RMS
- **Secondary Middle Point Grounded**
- **Ambient Operating Temperature:** -40 to +150° F
- **Storage Temperature:** -40 to +150° F
- **Moisture:** 5 to 95% Relative Humidity, Condensing

Instructions

*(If base plate is already installed, skip to step number 9)*

1. Locate the igniter blue “hot” and white “neutral” input leads.
2. Install the 32302 igniter gasket, if required, and route the leads through the appropriate base plate lead exit hole. Make sure these leads are not being crushed.
3. Mount the igniter flush to base plate with the mounting screws supplied.
4. Note: Use #6 x 7/16” screws when using the bottom mounting holes. Use #10 thread forming paint scraping screws, if using the two top mounting holes for 5250001 & 5250002.
5. Tighten all screws securely.
6. Install the barrier and base plate gaskets for AF, AFG, and CF375 Beckett burners. Do not use barrier gasket on NX.

*(Instructions continued on next page)*

* 32301 Barrier Gasket is not used on igniters for the NX burner. It must be used on AF, AFG & CF375 burners.

### Instructions continued

7. Use gaskets for other burner models, as required by the manufacturer.
8. Use of top mounting screws is possible for Beckett AF, AFG, NX, CF375, SM, SF, CF500 and CF800.
9. Mount the assembled unit to the burner using the screws supplied.
10. Use “paint scraping” screws for all burners (2 at the hinge and 2 for non-hinged base plates). Tighten these screws securely to provide effective grounding to burner housing.
11. Verify the burner is properly grounded.
12. Carefully route the igniter input leads to prevent them from being pinched during closing. Install cad cell, if applicable.
13. Fasten cad cell leads to control, if applicable. Wire white to neutral and blue to primary control ignition lead. Refer to control or appliance manufacturer’s wiring diagram.
14. Verify the igniter secondary output terminals are correctly arranged to make good electrical contact with the oil burner electrodes.
15. Close the igniter. Install and securely tighten the two front base plate retaining screws (4 screws, if no hinge).
16. Reconnect electric power to the burner circuit.
17. Verify with instruments that the burner is adjusted to the manufacturer’s recommended settings.
18. Cycle the burner several times to verify prompt and smooth ignition before leaving.
